EDUCATION

East China Normal University

M.S. in Basic Psychology

GPA: 3.49/4.00

Sep 2022 – Jun 2025

Shanghai, China

Southwest Minzu University

B.S. in Applied Psychology

GPA: 3.85/4.00

Sep 2018 – Jun 2022

Sichuan, China

RESEARCH EXPERIENCE

Illusory-Causal Impression Attenuates Event Boundary Detection

Jul 2024 – Apr 2026

Project Lead

East China Normal University

- Investigated how illusory causal impressions resist event segmentation—asking how the brain holds—rather than cuts—experiences across boundaries; found that such impressions delayed boundary detection and increased cross-boundary neural similarity.
- Designed a behavioral and EEG paradigm utilizing cross-context action-outcome sequences (inspired by film continuity editing) to induce illusory causality, matched against non-causal controls ($N = 39$ pilot; $N = 34$ EEG).
- Conducted electrophysiological analyses including ERP (N2 component), time-resolved decoding, temporal generalization, and Representational Similarity Analysis (RSA); linked neural representation to behavior by revealing that posterior neural separability predicts faster boundary detection.
- Conducted a follow-up behavioral study ($N = 41$) leveraging melodic sequences (DO-RE-MI-FA-SO) to manipulate external structural expectations, demonstrating that cross-boundary integration driven by illusory causality can be overridden by salient structural signals.
- Led manuscript preparation and revision; co-mentored a master's student whose thesis extended this project.

Bayesian Structure Inference Leads to Bias in Group Moral Impression

Jun 2023 – Jun 2025

Project Lead | Master's Thesis

East China Normal University

- Investigated the cognitive process underlying group moral impression formation and whether the same process governs impression updating; employed a Bayesian nonparametric framework to show that observers' inference of latent structures from behavioral distributions leads to systematic bias in both formation and updating.
- Contrasted CIM heuristic ("common = moral") model with a CRP-based latent structure model to predict bias in moral impression formation (Exp. 1a/1b); collected behavioral data ($N > 200$) and demonstrated that the CRP provided a superior fit, supporting the latent structure account.
- Designed a mouse-drag spatial arrangement task (Exp. 2) to quantify mental representations; revealed that observers mentally organize groups around inferred latent structures rather than salient visual labels

like gender—representational evidence for the latent structure account.

- Extended the modeling framework by using a Recurrent CRP (RCRP) to capture impression updating when behavioral distributions shift (Exp. 3); successfully accounted for observed updating patterns, thus likely unifying formation and updating within a single computational framework.
- Led manuscript writing; co-mentored an undergraduate research assistant whose work received the Outstanding Thesis Award.

Preprint: Li, J., Chen, F., & Hu, Y. (2026). PsyArXiv. https://doi.org/10.31234/osf.io/byoke_v1

Informational Helplessness Modulates Pain Tolerance but not Intensity *Sep 2020 – Apr 2022*
Project Lead | Undergraduate Thesis Southwest Minzu University

- Investigated the impact of cognitively induced helplessness on pain experience; demonstrated that helplessness selectively impairs the motivational-affective dimension of pain (reduced tolerance and worsened post-pain affect) without altering sensory intensity ratings, indicating a differential modulation of pain components.
- Designed a two-phase paradigm in which participants first completed unsolvable cognitive tasks to induce a helplessness state, followed by a Cold Pressor Task (CPT) to induce pain (measured pain tolerance, pain intensity, and post-pain affective valence); programmed this protocol in E-Prime.
- Collected behavioral data ($N > 80$); conducted statistical analyses (SPSS, JASP), visualized results in GraphPad Prism, and led manuscript writing.

Awards: Outstanding Undergraduate Thesis; Outstanding Innovation Project (university-funded).

Affective Touch and Facial Emotion Recognition *Oct 2019 – Oct 2020*
Undergraduate Research Assistant Southwest Minzu University

- Coordinated a cross-laboratory project (with Ball State University and City University of Hong Kong) investigating the neural mechanisms underlying the priming effect of affective touch (via robotic stimulation) on facial emotion recognition; iteratively refined the experimental paradigm based on pilot results.
- Organized EEG data collection training and managed laboratory logistics (including participant recruitment, equipment maintenance, and protocol adherence); collected high-quality EEG data ($N > 40$).
- Processed and analyzed EEG data using MATLAB and Python, performing preprocessing, ERP, and time-frequency analyses under the guidance of the PI.

CONFERENCE PRESENTATIONS

1. Li, J., Yu, L., & Hu, Y. (April 2024). **The cognitive mechanism of bias in group moral impression.** Poster presented at the *Annual Conference of the Chinese Psychological Society (Division of General & Experimental Psychology)*, Lanzhou, China.
2. Li, J., Chen, F., & Hu, Y. (April 2024). **Moral evaluation bias leads to moral devaluation.** Poster presented at the *Annual Conference of the Chinese Psychological Society (Division of General & Experimental Psychology)*, Lanzhou, China.

AWARDS & HONORS

Sichuan Province	Outstanding Graduate	2022
Southwest Minzu University	Outstanding Graduate	2022
Southwest Minzu University	Outstanding Undergraduate Thesis	2022
Southwest Minzu University	Outstanding Undergraduate Innovation Project	2021
Southwest Minzu University	First-Class Scholarship	2019, 2020
Southwest Minzu University	Outstanding Student Award	2019, 2020

TEACHING EXPERIENCE

East China Normal University *Fall 2023*

WORK EXPERIENCE

Mashang Consumer Finance Co., Ltd.

Mar 2025 – Mar 2026

AI Product Manager

Beijing, China

- Designed a psychology-informed customer profiling system for conversational AI; led data engineering for style-specific LLM fine-tuning by abstracting human communication strategies into training data.
- Integrated cognitive science frameworks (Theory of Mind, metacognition) into dialogue agents and simulated social cognition via multi-LLM Trust Game experiments, yielding two pending patents.

SKILLS

- **Methods & Modeling:** Behavioral Paradigm Design; Computational Modeling; EEG Data Collection & Analysis (ERP, Time-Frequency Analysis, Decoding, RSA)
- **Programming:** Python (PsychoPy, MNE), R/RStudio, MATLAB (Psychtoolbox)
- **Software:** E-Prime, SPSS, JASP, G*Power, GitHub
- **Languages:** Cantonese (native), Mandarin (fluent), English (TOEFL: 5.5/6)
